

Having Your Log Cabin Assembled for You

Whilst very many of our customers assemble their own Log Cabin very successfully and obtain a great deal of pleasure from the sense of achievement in carrying the project through from inception to completion, if you prefer to have your log cabin assembled this can easily be arranged.

Gudrum Classics Ltd Does not Offer an assembly service. We can supply contact information for an Independent Assembly Company who are entirely independent from us and whom our customers can contract to assemble the buildings. If you choose to use the Assembly Service - you would pay the assembly team on satisfactory completion for the Assembly Service (for the avoidance of doubt: Any service other than the supply of the products and their accessories forms a separate contract between you and the service provider and we do not warrant their work or services in any way). Prices for assembly start at £590.00.

We are very familiar with and confident in the work of the assembly company having worked with them for over five years and are happy to suggest that they can, and very frequently do, undertake the following work:

- Base Preparation
- Cabin Assembly
- Electrical and other Installations
- Timber Treatment of the Log Cabin
- Undertake Site work either ancillary or unrelated to the Log Cabin itself

Almost all comments from previous customers whom have used the assembly service are very positive and therefore we continue to suggest their services

The buying process for a log cabin where our customer requires an assembly service is usually as follows:

1. Our customer will either purchase a Log Cabin / Summer House directly through the web site or contacts us to discuss styles and designs and the various options available and make the purchase by phone.
2. As above - very many of our customers choose to assemble their own log cabin (See below for mor information). This is perfectly possible for anyone with basic DIY skills and tools and can be a very rewarding experience. As a guide about 7 out of 10 customers assemble their own cabin.
3. However for those whom do not wish to assemble their cabin part of the purchase decision may depend on the assembly service that we can offer so, if this is the case, this would be discussed at this early stage. We would also establish whether there would be other work to carry out at the same time. If the service requirement is simply an assembly service - we will give a price over the phone immediately. If the customer requires more work - ie site preparation - we would usually arrange for the assemblers to make a site visit to discuss precise requirements and agree terms.

4. We then schedule in Delivery Dates and Liaise with the Customer and the Assemblers to ensure smooth completion of the delivery and the work

In Summary:

Simply contact us for information on the Log Cabin of your choice and we will liaise directly with the assemblers. They usually arrive on site within just a couple of days of the building being delivered (and frequently it can be arranged that they arrive on site the same day as the building). The contract for the assembly and any other work will exist between you and the service providing company. We are not involved in the assembly process in any way except as offering an arranging service. You will pay the assembly company directly the figure agreed at the point of order of your log cabin when the job is satisfactorily completed. If you would like more information on this excellent service - please contact us on:

0845 258 1900

In the case of Self Assembly:

All of our garden buildings are designed to be easy self-assembly. The garden buildings include all parts, optional roofing materials (see options on product pages), glazing etc. The assembly process is likely to take between 1 and 2 days for two people who have basic DIY skills and a very few basic tools. All garden buildings are supplied with easy to follow assembly instructions (some are available to view on the product pages).

Each individual building is delivered with its own specific assembly instructions.

The garden building should be assembled onto a flat and level base the surface of which should be slightly above the surrounding ground area (to prevent water pooling under your building).

A suitable timber preservative treatment should be applied to all surfaces both inside and outside of the building as soon as possible. The timber preservative should then be re-applied at least annually thereafter.

To order assembly please place your order for the cabin by phone (0845 258 1900) and assembly together.
